ASISH SARANGI

+91 7894847104 | asishsarangi2005@gmail.com | LinkedIn | GitHub | LeetCode | HackerRank | Bhubaneswar, India

EDUCATION

Silicon University — ***2023 - 2027***
Bachelor of Technology in Computer Science – CGPA: 9.49/10 — *Bhubaneswar, Odisha*

Saraswati Science Higher Secondary School — ***2020 - 2022***
Senior Secondary (Science Stream) – 91.5% — *Cuttack, Odisha*

Saraswati Sishu Vidya Mandir — ***2019 - 2020***
Matriculation – 82.67% — *Khordha, Odisha*

SKILLS

Programming & Development: C, C ++, Python.
Machine Learning: Classification, Regression, Clustering, Feature Engineering, Ensemble Learning (Bagging, Boosting, XGBoost, AdaBoost)
Deep Learning: CNN, ANN, RNN, LSTM, GRU, Transformer
LLM Operations: Pretraining, Fine Tuning, Model Optimization
Frameworks & Libraries: Pandas, NumPy, Scikit-learn, TensorFlow, Keras, Matplotlib, LangChain

EXPERIENCE

Python Intern, Codec Technologies Pvt. Limited — ***April 2025 – June 2025***

- Online internship focused on **Python programming**, working on real-world projects involving **data handling, scripting, and automation**.
- Developed and deployed **Python-based solutions** applying core programming concepts including **OOP, file I/O, and API integration**.
- Collaborated with the team to build **utility scripts and pipelines** for internal workflows.

LLM Using Python Intern, Vigor Edtech — ***May 2026 – July 2026***

- Hybrid internship building **LLM-powered applications using Python**, leveraging frameworks such as **LangChain** for building AI pipelines.
- Worked on **prompt engineering, fine-tuning workflows**, and integrating **LLM APIs** into educational tools.
- Implemented **RAG (Retrieval-Augmented Generation)** pipelines and **conversational AI** features for the edtech platform.

PROJECTS

Silicon Wafer Fault Detection using ML (UCI SECOM Dataset) — ***December 2025***
ML Project | Silicon University

- Built an end-to-end ML pipeline on the UCI SECOM semiconductor manufacturing dataset (**1,567** samples, **591** features) to detect faulty wafers with high precision. Trained and compared 5 classifiers - Logistic Regression, SVM-RBF, Gaussian Naive Bayes, Random Forest, and KNN (GridSearchCV – k=2).
- **SVM-RBF** achieved **99.66% accuracy** and perfect **ROC AUC (1.0)** with zero false negatives; **Random Forest** followed at **99.20% accuracy** and **99.96% ROC AUC.**

AI- (FAQ) Chatbot — ***May 2026***
Conversational AI application built with Python

- Developed an AI-powered FAQ chatbot leveraging natural language processing techniques to handle multi-turn conversations.
- Created and Used Custom defined Knowledge base for Question – Answering. Implemented intent recognition and context-aware response generation for an interactive user experience.

Customer Churn Prediction — ***February 2026***
Binary classification ML project using tabular customer data

- Built a supervised learning pipeline to predict customer churn, applying feature engineering, encoding, and scaling on structured business data.
- Evaluated multiple classifiers (Logistic Regression, Random Forest, Gradient Boosting,) and achieved accuracy **~55%** using an ensemble classifier HistGradiantBoost Classifier. Generated actionable insights through feature importance analysis, identifying top drivers of customer attrition.

ACHIVEMENTS & CERTIFICATIONS

- **Winner** in **Spec2Model ML Hackathon 2026,** organised at Silicon University, Bhubaneswar.
- Solved **150+** Data Structures and Algorithms problems across multiple platforms
- The Joy of Computing Using Python – (Elite + Silver) **IIT Ropar, NPTEL**
- Deep Learning – (Elite + Silver) **IIT Ropar, NPTEL**
